

Black Raspberry is FruitFast's Newest Whole Fruit Softgel *- Supports Healthy Cardiovascular Function* -*

In a perfect world, all the freshest fruits and vegetables would be at their peak year round, unaffected by adverse weather or crop shortages, and could be found at farm markets and in the produce aisle any day of the month.

But that isn't reality.

Instead, perishable fruits are particularly difficult to find - yet more and more scientific research shows that the dark-skinned varieties hold the greatest health benefits due to their high content of antioxidants and anthocyanins.

This dilemma is what spurs FruitFast®, a leader in the fruit supplement industry, to continue to introduce products that solve this ongoing dietary challenge. The latest solution is the FruitFast Black Raspberry Softgel.

While attending the International Berry Health Benefits Symposium a few years ago in Corvallis, OR, FruitFast owner and founder Bob Underwood, listened intently as researchers touted the healthy properties of brambles, or caneberries. He was particularly impressed with scientific findings surrounding Black Raspberries by Gary D. Stoner, PhD of Ohio State University and other leading berry investigations conducted at Johns Hopkins University. Ongoing research is helping scientists discover the composition of this fruit as an excellent source of naturally-occurring antioxidants.

But the issue remained that eating a half cup of fresh Black Raspberries every day is simply not practical. Black Raspberries are hard to come by, spoil quickly and are rather expensive, making daily consumption of the healthy berries nearly impossible.

That's all changed with the introduction of FruitFast's Black Raspberry softgels.

"Using our revolutionary process utilizing the whole fruit – including the skin and pulp – the Black Raspberry softgels preserve the berry's phytonutrients without extracting compounds or turning the fruit into a less potent powder," explains process innovator, Bob Underwood. "We are the only company in the world that uses this fruit technology. We rely on Mother Nature's formula as being the best way to benefit from the fruits' inherent properties."

Each Black Raspberry softgel capsule has 70 mg of Anthocyanins and 60 mg of Ellagic Acid. Black Raspberries support healthy cardiovascular function* and are

a source of ellagic acid for a healthy immune system.* Best of all, FruitFast softgels utilize 21st Century technology to create a superior product without added sugars, fillers or preservatives and all FruitFast products are made from North American grown fruit.

The good news doesn't stop there. For a limited time, Black Raspberry Softgels are available for the introductory price of \$14.95 per 60 count bottle.

Other softgels in the FruitFast line are CherryFlex made from Montmorency Red Tart cherries, Wonderful Pomegranate from the San Joaquin Valley of California and Wild BlueBerryIQ made with Maine Wild Blueberries.
